

Chetany Bhardwaj

Gurugram, India | chetany@sitafarm.com | chethack.com | [LinkedIn](#) | [Github](#)

I have experience working with low-level systems like blockchain client development and infrastructure management. I have worked on high-stakes projects such as Belle-II, Polygon PoS' hiemdal-v2, central change event and infrastructure notification engine at Groww and lean-consensus ethereum client development in zig.

Experience

Contractual Open Source Engineer, Zeam – Remote Aug 2025 – Ongoing

- Core maintainer of ssz.zig, implementing SSZ List[N] and Bitlist[N] collections for Ethereum lean-consensus achieving 81.8% spec coverage [PRs].
- Designed a validation framework with 26 error types, replacing unsafe panics with production-safe error handling.
- Authored 84 test cases (74% of test suite) and refactored core collections from BoundedArray to ArrayList.

Infraplatform Intern, Groww(Y Combinator W18) – Bengaluru, India Jan 2025 – Jun 2025

- Engineered Go-based hexagonal infrastructure and observability tooling for India's largest stock broker serving 50M+ users.
- Integrated infrastructure sources (ArgoCD, Argo Rollouts, GCP) into a centralized change event notification engine.
- Processed 8M+ daily events, delivering over 1,000 actionable notifications to developers and SREs.

Protocol Software Engineering Intern, Polygon Labs – Remote Sep 2024 – Dec 2024

- Contributed to the Heimdal-v2 client (Cosmos-SDK), migrating encoding from Amino to Gogoproto [PRs].
- Optimized core consensus workflows and protocol testing to ensure stability and backward compatibility.
- Architected an automated testing framework to validate the Heimdal client against 100s of Cosmos-SDK commits, reducing bug diagnostic time from hours to minutes. [Link]

Grid Computing R&D Intern, KEK – Remote Feb 2024 – Dec 2024

- Developed a containerized HPC job environment using Apptainer, improving OS migration efficiency by 50%.
- Authored detailed deployment and automation runbooks for GRID infrastructure standardization.

Technical Skills

Languages: Golang, Rust, Zig, C, JavaScript

Technologies: Cosmos-SDK, SP1 zkVM, gRPC, Prometheus, Grafana, Docker, Kubernetes, GCP, AWS, PostgreSQL, CockroachDB, MySQL

Concepts: RDBMS, Distributed Systems, Consensus Algorithms, ZK Proofs, CI/CD, System Design

Projects

zkSampler, EthGlobal Trifecta - 1st Prize (ZK Track) [Link](#)

- Built a ZK proof system to verify audio sample authenticity using the SP1 zkVM in a Rust/Next.js full-stack app.

Lean Consensus, Contribution to Zeam (Ethereum Client) [Link](#)

- Contributing to Ethereum Lean Consensus with a Zig implementation and discourse around lean client development.

Education

University of Petroleum and Energy Studies, BTech in Computer Science & Eng. Aug 2021 – May 2025

- GPA: 8.52/10.0 • **Major:** Cloud Computing • **Minors:** DevOps, User Centered Design

National University of Singapore, Polkadot Blockchain Academy May 2024 – Jun 2024

- Graduated from the Developer Track, focusing on Cryptography, Game Theory, and the Polkadot/Substrate ecosystem.

Awards

- [AWS Certified Solutions Architect - Associate](#)
- [EthGlobal Trifecta \(1st, ZK Track\)](#)
- [Chainlink Constellation Winner](#)
- [UHackathon 3.0 Winner](#)
- [3x EthGlobal Istanbul Winner](#)
- [2x EthGlobal Paris Winner](#)
- [EthGlobal Cannes Circle Gasless Experience](#)
- [Dean's List](#)
